SOUTH PACIFIC RAILROAD TO SPRINGFIELD, MO,

MAY 3, 1870.

SPRINGFIELD, MO.
1870.
OPENING
OF THE
ATLANTIC AND PACIFIC RAILROAD
AND COMPLETION OF THE
SOUTH PACIFIC RAILROAD TO SPRINGFIELD, MO.

A great event in the history of St. Louis and of the State of Missouri occurred in the opening of the railroad to Springfield on the 3d day of May. The South Pacific Railroad has burst through upon the prairies of Southwest Missouri and has welded its western terminus upon the rails of the Atlantic and Pacific Railroad. This latter road is going to the Pacific coast as rapidly as it is possible to construct a road in this day of rapid railroad building. It had been announced that the road would be opened to Springfield, and hundreds of the influential and substantial citizens among the friends of the President and Directors received their cards of invitation. A long train of passenger and sleeping cars were provided, among them two of Pullman's silver palace cars, which were festooned with gay garlands, and decorated with bright bouquets of flowers. Every preparation was made for the comfort of the large crowd invited. About eight hundred invitations had been issued. When all were safely seated in the cars the whistle sounded, and the long train drew its length out towards the West with every car as full as was consistent with comfort to the
ladies and gentlemen composing the guests of the company. For what occurred on the trip and at Springfield, the following special despatches to the Missouri Democrat will be found to be the most accurate report made for the press.

[Special despatches for the Missouri Democrat of May 4th.]

OPENING OF THE SOUTH PACIFIC RAILROAD TO SPRINGFIELD.

EXCURSION OUT ON THE PRAIRIES, ON THE ATLANTIC AND PACIFIC RAILROAD.

Laying a Mile a Day of American Rails on the 35th Parallel Route to the Pacific.

FIRST DESPATCH.

ARRIVAL.

Springfield, Mo., May 3.—The great South Pacific jubilee excursion party arrived at this place at a little after eleven o’clock this forenoon.

ON THE ROUTE.

At every station, after leaving the Pacific depot in St. Louis, crowds were assembled, and cheer after cheer went up as the excursion train swept by.

Accessions were made at each stopping place last night, even in the forest; and on the plain bonfires were blazing in honor of the occasion.

Arriving at Springfield we found a vast crowd assembled, comprising people of all grades, high and low, white and colored, men, women, and children.

The irrepressible iron horse, invading and penetrating this remote section, miles away from the proud center of civilization, has brought a new life to this region. The
people here keenly realize this fact, and will prove themselves worthy of it.

Cannon were fired, cheers rent the air, flags fluttered to the breeze—the inhabitants and all nature appeared to participate in the grand jubilee.

Many of the ladies and gentlemen comprising the excursion party repaired to the City Hall, while others promenaded the town, taking in all its picturesque beauties, which are by no means insignificant.

A platform has been erected IN FRONT OF THE COURT-HOUSE. for the speechifying, and such other preparations made as were deemed suitable by the citizens.

A little before one o’clock Simpson’s battery, preceded by the Springfield band and the stars and stripes, appeared in the public square, the parrots on the gun carriages reminding the denizens most forcibly of the glorious panoply of war so familiar to their visions in days gone by.

Among THE NOTED PERSONAGES with the excursionists, it may be proper to designate, in this dispatch, Governor McClurg, Lieutenant-Governor Stanard, Ex-Governor Fletcher, Mr. Hayes, President of the South Pacific, Mr. Peirce, Managing Director, Mr. Stout of New York, Mr. Rich of Boston, Hon. R. T. Van Horn, Mr. Coffin of New York, Mr. Curtis of Boston, and several others, altogether too numerous to mention.

At one o’clock THE BATTERY TOOK POSITION on the public square and blazed away, making the plains resound with the reverberations of its thunders. This was the signal for the assembling on the square, and visitors and citizens flocked thither to the music of Herwig’s soul-inspiring strains.
It was announced that the speaking would commence at half-past two o'clock—giving the people an hour and a half to amuse themselves as best they might.

SECOND DESPATCH.

THE CELEBRATION.

Springfield, Mo., May 3.—Assembling around the platform was a large crowd of people, who evinced great interest in the proceedings and the occasion.

On motion of Colonel Boyd, Governor McClurg was unanimously called to preside.

After thanking the assemblage for the honor conferred, the president announced, in pursuance of a resolution, the following vice-presidents: Hon. R. T. Van Horn, Ex-Governor T. C. Fletcher, Hon. S. W. Hendlee, Hon. S. A. Rountree, Hon. J. S. Phelps, Hon. D. T. Jewett, Lieutenant Governor E. O. Stanard, R. W. Jamison, Esq., Major Lee R. Shyrock, Hon. John Hogan. Messrs H. E Havens and D. C. Kennedy were appointed secretaries. An appropriate prayer was offered by Rev. Mr. Greenman. After the organization was perfected, the president introduced Hon. John S. Phelps, who delivered the following address of Welcome:

SPEECH OF HON. JOHN S. PHELPS.

Mr. President and Directors of the South Pacific Railroad: In behalf of the citizens of Springfield and its vicinity, I tender you a hearty welcome. For years we have been anxiously looking for the completion of a railroad to this city. We knew the difficulties to be overcome, the obstacles to be removed, and the arduous work to be accomplished, and we duly appreciated the great advantage the road would be, not only to Springfield, but to the surrounding country.
You now have our heartfelt thanks that the great and difficult work is finished, and to you, Mr. President and Directors of the Atlantic and Pacific railroad, the completion of the road to this point is a source of as much joy as it is to us. Here your great enterprise commences; here your work begins, and without the completion of the South Pacific railroad, you could not move; you could do nothing. You propose to build a railroad to the Pacific ocean. It is a work of vast importance to us and to the State. Indeed it is a national work.

Welcome, again I bid you welcome. Our hearts are with you in the enterprise, and to you, ladies and gentlemen, who have come hither to meet us on this occasion in behalf of the citizens of Springfield and vicinity, I also tender a welcome. I notice there are with us the Governor and other officers of the State, Ex-Governor Fletcher, the Speaker of the House of Representatives, two of the members of Congress of this State, two ex-members of Congress, an ex-mayor of the city of St. Louis, ex-postmaster of the city of St. Louis, the President of the Board of Trade of St. Louis, the Secretary of State and an ex-secretary of State, several ex-members of our Legislature, and other distinguished gentlemen who have held high and important positions in their localities at the hands of the people. All these have come here to greet us. I tender you a cordial welcome, and hearty welcome. Many of you perhaps have had business relations for years with some of the people of this city and of the Southwest, yet, as this is your first visit to our beautiful country, you can hardly appreciate the difficulties under which we have labored without an easy and expeditious connection with the other portions of the State. We were almost in an insolated condition; access to our country could only be obtained by days of tiresome and weary travel over rough and rugged roads, and through a hilly and mountainous country, whilst for years you have been in the enjoyment of railroad
communication with all the advantages you possess; nay, more, we have rejoiced with you in your good fortune and prosperity, and have earnestly endeavored to secure the same beneficent results to ourselves. We cordially greet you on this morning of our prosperity. We unite with you in rejoicing that this railroad, of such infinite advantage to the people of Southwest Missouri, and of such great importance to the State, and which will tend so greatly to increase its wealth and population, is completed to our city.

You have but just entered upon the table land, and beautiful country which extends not only to the western line of the State, but for many miles beyond the limits of our State. And now, my countrymen, this is a happy day for us. We celebrate the completion of the South Pacific railroad to our city. This is an event which opens to us a new and a bright future henceforward, by reason of an easy and rapid communication with all parts of our country. This part of our State, with its mild and salubrious climate, with its fine, pure water, and numerous streams, with its rich mineral wealth, with its fine fruit of every description, and with its rich and fertile soil, invites the enterprising man to make it his abode, and unite with us in advancing its material prosperity.

Everything which can be produced in the United States can here be produced in superabundance, except the ice of Alaska, the cotton and rice of Carolina, and the tropic fruits of Florida. No portion of our country surpasses this in natural advantages. The bright and happy future, the subject of our wishes for many long years, has just arrived upon us. No longer shall we be compelled to travel by stage on bad and dangerous roads, over a broken, hilly and mountainous country, to reach the commercial emporium of our State. No longer will we be compelled to give one-half of our surplus crops to transport the other half to market. No longer will we be compelled to pay such heavy prices for the transportation of such merchandize as we need; and
though I have spoken of hills and mountains between this city and St. Louis as objects we dreaded in our journey, yet those hills and mountains are rich in minerals, and will soon greatly contribute to swell the volume of wealth of our State. About one hundred and ten miles of railroad, part of it through a very rugged and broken country, and very expensive to construct, has been built and put in operation within the last eighteen months. To the capital, to the skill, energy and perseverance of the South Pacific Railroad Company we are indebted for the great benefits we are now about to enjoy.

But, my friends, you can and will contrast the past with the present. We are not here to dwell on the past—we are to consider the present and the future. The Atlantic and Pacific railroad commences at this city. This road will be constructed via the valley of the Canadian river and Albuquerque, in New Mexico, to the Pacific ocean. Ten miles of that road is now completed and ready for use. The roadbed to Peirce City, 52 miles west of this, is now ready for the superstructure, and the road will be completed to Peirce City before the 1st day of next July. Grading on the road beyond that point has been done.

This road is to be the great thoroughfare to the Pacific. You have just entered upon the beautiful and fertile country which extends for hundreds of miles in a westerly course from this city, and through which this road will pass. No Trans-Continental route possesses the advantage this route possesses. I have travelled upon and near the route this road will pursue to New Mexico, and of that portion of the route I speak of my own knowledge. Passing westerly through the Cherokee country; thence to its crossing the Arkansas river, thence to the Salt Fork and the Red Fork of the Arkansas river, thence to the North Fork of the Canadian river, thence to the Canadian river and up the valley of that stream to the Territory of North Mexico, you pass a well-watered country, one which admits of settlements along its
entire route. The streams which will be crossed have more timber on them than any other streams passing through the great Plains, and much of that timber can be used in building that road, and in portions of the upland there are forests.

The ascent is gentle, and the grades will be light. There are no mountains to be crossed till you approach Albuquerque, and the pass Carmel affords a feasible route through the mountains to the valley of the Rio Grande. Crossing to Rio del Norte, near Albuquerque, the ascent to the summit of the mountain, between the Rio del Norte and the Colorado of the West, is so gradual that you hardly perceive you are ascending.

From that point the Colorado Chiquito, or Flax river, is soon reached. Passing down the valley of that stream for some distance, you then leave it and pass near the San Francisco mountains, where there is an extensive forest (called the Black Forest) of pine and cedar; thence to the Bill Williams creek, and run it to the Colorado; west of the Colorado, and near the junction of the Sierra Nevada and Coast ranges of mountains, it is possible to the construction of a railroad. Beyond these mountains you enter the Tulare Valley, leading down the San Joaquin river.

The climate of this entire route is mild; it is near the 35th parallel of latitude. But little snow in the most severe winters falls in any portion of this route, hence the running of cars will not be obstructed by snow. The greatest altitude on the route is about seven thousand feet above the level of the ocean. In that latitude the cold on the highest summit is not severe. The country on its entire route will be settled, except a small portion between the Colorado river and the mountains.

This route is central, and therefore will accommodate both northern and southern portions of the country. It will reach the Mississippi river at two points or more. A branch road will extend east nearly from the valley of the Canadian
river to Fort Smith, Arkansas, there connecting with the Memphis, Little Rock, and Fort Smith railroad, thus having direct communication with Memphis, and by this road, the the South Pacific, we connect with St. Louis, and from Memphis and St. Louis then there is railroad connection with every important part on the Atlantic coast, and on the Gulf coast of the Mississippi.

If no road to the Pacific had been built, any one looking at the map of your country, considering the population, accessibility for all, climate, and a route adapted to settlement, would have selected the mouth of the Ohio river—Cairo—as the starting point, and thence by the Valley of the Cana-dian river, as the most feasible route to the Pacific. If only one road was to have been built, the same advantage would have resulted by commencing the road at St. Louis, and Memphis, and uniting the roads west of the State of Ar- kansas.

Other considerations governed in selecting the route of the Union Pacific railroad. We do not complain of that route. We are glad that road has been built. We do not complain because the Government aided in building that road, not only by a grant of land, but by a money or bond subsidy; but we ask the Government to be just. Let it not be partial in its favors, nor in its bounties. All sections of the country should have alike.

Other roads must be built to the Pacific. The Atlantic and Pacific, the Northern Pacific, and it is probable an ex-treme Southern road will be built. The necessities of the country, its trade and commerce, and the rapid development of the resources of our Territories, the transportation of troops and their supplies to preserve peace with the Indians, demand several roads. Other aid for their construction beside lands should be granted. But with respect to this road the Government has not yet complied with its obliga-tions. It has not secured the right of way for the entire grant of land promised in the charter; but we have confi-
dence all these obligations will, in due time, be discharged, and that the progress of the road will not be retarded for the want of any proper action on the part of the Government.

We trust the difficulties with respect to the lands in the Indian country, will be adjusted in a manner compatible with the interests of all, doing injustice to none. Our interests in this road must be carefully watched by our delegation in Congress; if obstacles to its progress have been placed in the way, they must be removed. The wild Indians must not be located on the line of our road; those which have been so located should be removed; such are the feelings of our people; the progress of our road must not be interfered with nor retarded.

In the Indian country this road will pass near numerous salt springs, and not far from the celebrated salt plain. Here, in the summer season, provided by solar evaporation, salt, to the thickness of four or five inches, is found lying on the ground. This salt plain is eight or ten miles in length by three or four miles in width. It is rumored that the Indians know of a salt mine in its vicinity, but until the wild Indians shall be kept away and the means of transporting the salt by rail shall be furnished, those salt springs will be of little value. The construction of this road will render them a source of wealth.

This road will pass through the heart of the Territory of New Mexico, which now contains a population of 120,000. Though rich in minerals, the Territory is sparsely inhabited. Until recently all the supplies for its inhabitants were transported by wagon, nearly one thousand miles. In the vicinity of the line of this road coal of a good quality has been found, and iron, rich copper ore, and the precious metals are found in many localities. The recently discovered mines of silver and gold compare well in richness with the mines of Nevada and California. This Territory will soon receive a large access to its population. Its mines will be successfully worked, and will add greatly to our wealth.
But let us remember that we are seeking to extend and enlarge our commerce with China, Japan, and the East India trade which is rapidly increasing. As our business relations with the people of China and Japan shall become more extended, these nations, with their abundant population, will furnish many emigrants to this country. And why shall they not come among us, if they shall desire to do so? Why shall they not aid in the cultivation of our soil? Why shall they not, by their industry, add to the wealth of this nation; and why shall they not become citizens, if such shall be their wish. Shall we repel laborers from coming amongst us? We say let them come; it was a happy event in the diplomacy of our country when Japan opened to the nation a more liberal and extended commerce than was prior to that time enjoyed by any nation. The merchant princes of our State, in our great city of St. Louis, have already opened a direct trade with China. They receive their goods by the Union Pacific railroad; this is a step in the right direction, and thanks to the merchants of St. Louis who have inaugurated this trade, this commerce in its infancy, who can properly estimate what will be the value of that trade in a few years hence?

But when this road shall be extended to the Pacific, the products of India and Japan will pass our very doors on their way to St. Louis and other portions of our country. This road to Southwest Missouri should have been built long before this time. It will profit nothing to inquire who was at fault, nor who to censure, if any. Let it be as it may, we now have a road which greatly contributes to our wealth, our prosperity and our happiness. It contributes greatly to the wealth of the State, and especially does it advance the commerce and prosperity of St. Louis. We rejoice in the prosperity of that city. It is destined to be the great city of the Valley of the Mississippi; it is the city of Missouri, and all the people rejoice in its prosperity. Let her people be true to her interests—improve the advantages she now
possesses, encourage and build up her manufactures, extend her trade and commerce, and she will outstrip all her rivals.

In behalf of the people of Springfield and its vicinity, and in behalf of the people of Southwest Missouri, I return to the President and Directors of the South Pacific railroad our heartfelt thanks for the great and inestimable benefit they have conferred on us, and to the President and Directors of the Atlantic and Pacific railroad we say, God speed them in the great and noble enterprise in which they are engaged! Push forward the work until the road shall reach the Pacific. Our hearts are with you; and to those from distant parts of our State, who have honored us with their presence on this day of our rejoicing, we tender our thanks, and again bid them, and the officers of the railroad companies, welcome, a hearty welcome! (applause.)

SPEECH OF FRANCIS B. HAYES, ESQ.

Hon. Francis B. Hayes, President of the Atlantic and Pacific, was then introduced, and was received with cheers and applause; in response he spoke as follows:

Mr. President: It is my privilege to return to the citizens of Springfield and this vast concourse of people gathered from all parts of Missouri, the grateful thanks of the directors and stockholders of the South Pacific and Atlantic and Pacific railroad companies for their cordial greetings.

We have met in this beautiful city, the most lovely flower of Southwest Missouri, to congratulate each other upon the opening of this country to further development and improvement. Most heartily do I congratulate all friends of the enterprise that the many difficulties we have encountered—more, far more than you imagine—have been overcome, and that now the engine is in Springfield. You have kindly recognized what the South Pacific railroad has accomplished, and this gives that company courage to join hands with the
Atlantic and Pacific Railroad Company in the great march to the Pacific.

This good city is the initial point of the Atlantic and Pacific railroad, and the mountains of the Gasconade and Ozark having been conquered, and two hundred and ten miles of road completed, we will now move westwardly with rapid strides. We have within a few days reached Springfield, yet at this hour our engine is ten miles west of this point, and within thirty or forty days it will be screaming fifty miles further west. We shall not rest then. Before the leaves fall our friends at Neosho must be prepared to welcome us, and thence onward we shall go, provided our good friends of the neighboring Territory will give us safe convoy through their country, and we receive the aid promised us by the United States.

We shall push our branch road also westwardly from Van Buren, in Arkansas, and uniting on the Canadian river that branch with the main road from Springfield, we hope to give the country, on the thirty-fifth parallel, the most desirable route to the Pacific ocean. The immense work in which we are engaged requires all the assistance you and the country at large can give us. As you will give us the credit of keeping our word to you up to this time; I ask you to believe me when I state that we will continue to be faithful to our promises. Springfield shall be raised to be one of the large cities of the United States, and Missouri shall enjoy the immense benefits of this great Trans-Continental railroad, if the Atlantic and Pacific Railroad Company obtains the aid which has been promised to it, and which promises the great State of Missouri has the right to demand shall be faithfully performed by the United States.

It is for you, gentlemen and ladies, as well as for me and my associates, to unite in accomplishing the great work we are engaged in; and if we do succeed in our efforts, and this road is completed, you and I will have the satisfaction of having aided in accomplishing a work of more importance.
and value to this State and to the nation than any ever before undertaken. Then let our cry be, "Onward, onward to the Pacific ocean." (Cheers.)

Ex-Governor Fletcher was the next speaker, whom the President asserted needed no introduction to a Missouri auditory.

SPEECH OF GOVERNOR T. C. FLETCHER.

He was received with applause, and spoke as follows:

My FRIENDS: There is victory in this—glorious victory! Such a victory as peace only brings to patient, persistent toil in the right. In such an hour the human heart knows its most delicious thrill of feeling. God pity the poor miserable creature who has never experienced the joy throbs of a victory crowning the struggle for the accomplishment of some good thing for mankind.

Aye! I hear the deep rumbling echoes which are given back from the forests and hills around us for the first time. 'Tis the sound of the tread of the ages—the noise of the footfall of destiny as it grandly marches onward.

At this distance of two hundred and forty-one miles from where the central city of the Republic sits upon the sunset bank of the Father of Waters—at an altitude of nearly nine hundred feet above the quays of that city. Here, at a distance of nearly fifteen hundred miles from Boston, a portion of the stockholders in this enterprise send greetings and congratulations to their associates down by the Atlantic shore, telling them in words of lightning the story of their success, and announcing that there is to-day an unbroken line of railroad and telegraph communication from Plymouth Rock to Springfield, Missouri.

From where the Pilgrims landed to where yonder locomotive stands, has been the scene of one steady, unchecked, triumphant march of a people whom God designed to lead in the advance of the column of progressive liberty and civilization.
On a great occasion in our history I declared that I had no words of mere exultation for the hour of victory. I cease to fight when the battle is ended, and cease to talk of an enterprise when talk is no longer necessary to its success. To the soldiers in the army of progress, every triumph should be but an incentive to the achievement of other and greater things. All that we have accomplished should be but earnest of the things we are to do.

I congratulate the people of Southwest Missouri on the completion of the South Pacific Railroad, and the bringing of the locomotives, iron, and cars for the Atlantic and Pacific Railroad. The completion of the one enterprise is but the beginning of another far more grand in its proportions and results. I do not wish to even consume the time to recapitulate the chief points of interest in the history of the road—the completion of which we celebrate to-day. I have been with it almost from its infancy, and have known all its friends. I see around me here some who have done noble service, others are absent and deprived of the pleasure of participating with us in this joyous assemblage. From Hon. John S. Phelps I first learned, some fifteen years ago, to appreciate the project for this road. The franchises of the Atlantic and Pacific Railroad were the greatest inducement for building this road, and for the act of Congress incorporating that company we are chiefly indebted to the Hon. B. Gratz Brown, who was its author and had charge of it in the Senate. And next, I believe, we are under obligations to the distinguished Representative from the Sixth District, Hon. R. T. Van Horn, who had charge of it in the House, and who I am glad to see with us to-day. But the whole truth is, we are indebted for the road most of all to Francis B. Hayes and Andrew Peirce, Jr. When the last days for accepting of and complying with the requirements of the act of 1868 were drawing to a close I went East as chief executive officer of the State, to promote its acceptance. I found New York capitalists wanting in confidence in
each other and in every body else, and so busy with the stock board, the gold board, and the horse-races that nothing could be done there. I was invited to go to Boston, and did so. A few men of wealth were called together, they met promptly at the minute designated, and their words were few. They only required of Mr. Hayes to say that he had examined and approved this enterprise, and of Mr. Peirce that he would take charge of the work, when they put one million seven hundred and fifty thousand dollars into my hands in less than an hour, to start the enterprise. It was the confidence these capitalists of Boston—and Mr. Stout, Mr. Coffin, and one or two others, who are from New York, and yet do not go to the races—had in Messrs. Hayes and Peirce that procured the money. But I did not intend to talk of the past. I would like to recall some of the stirring scenes in the past history of this road in which your able and energetic member of Congress, Colonel Boyd, Colonel Gravely, Senator Headlee and many others of the true men of the Southwest bore a noble part, but must not stop for that purpose. There be men in Missouri who live in the past. I leave all the finished railroads of the State with them, to talk and write of as long as the Good Lord—for purposes beyond mortal ken—shall permit them to cumber Free Missouri. As we enter the grand future now open before us, I expect to leave all these men with the dead past, and will do so without a sigh of regret—leaving "the dead to bury the dead," and only asking of them not to obstruct the course of those who desire to achieve something useful and good in the future.

By the financial and business ability of the officers of the South Pacific Railroad Company—by the honest and faithful performance of their undertakings, the road is finished, and the Southwest is clasped in the iron embrace of commerce. Just yonder is the great city, only now ten hours distant; you may almost see the cloud of smoke ascending from the fires of her busy industry. There the thousands engaged in manufactures are ready to become the
consumers of the surplus productions of your surpassingly fertile prairies. There the arteries of trade are so centered that your live stock and produce may be thrown into the great depot for distribution and for exchange for the productions of other industries and other climes.

It is not backward along the way we have come that we want to look, but forward. Urged by the new hopes born of past successes we move onward, Onward! till this track shall lead to the ocean shore and the products of the Indies and of the orange groves, sugar plantations and cotton fields of the Gulf coast region shall be brought to and through Springfield to the principal point of their distribution in the North American valley—the heart of the Continent at St. Louis; portions of them to be borne off up and down the river, and other portions to go on Eastward over the iron arches, which, in proportions of beauty and grandeur, are soon to span the great river, and challenge the wonder and admiration of the world.

The Locomotive has swept its fiery course across the Kickapoo prairie, lighting up new interests, new hopes and new enterprises to the people of the Southwest. It starts this afternoon on the American rails of the track of the Atlantic and Pacific road—its head light will reflect the rays of the declining sun as they fall across the broad emerald expanse of Grand prairie—and it will go crashing its way down the western declivity of the ridge on towards the valleys of the great streams of the West and South. At the signal of the booming of the 4th of July guns it will join the shout of the nation’s jubilee at a point where four hundred and ten miles more of railroad will connect Galveston with St. Louis by rail, and where about thirty miles more of road will penetrate the Indian country.

The Government has become liable for about sixty-four millions of dollars in bonds, on account of Pacific railroads to the north of us, beside large land grants. The completed road and all the incomplete ones which have received
a subsidy in bonds, connect with the Northern system of roads leading eastward. All these roads are so far North as to practically exclude from any benefits from them all of that now important part of our country formerly known as slave States. The interests of the central belt and Southern States, in fact of the whole country, demand a railroad to the Pacific along or near the 35th parallel of latitude. The grant of land is all that Congress has given to aid this most important road. For the greater part of the way the alternate sections not given would perhaps be worthless to the Government for centuries yet to come without the railroad. By the railroad they will be made saleable, and the proceeds of their sale will reimburse the Government for almost the whole amount put into the other roads.

Yonder you see the track already reaching out westward away across the Prairie. There goes the locomotive out on the Atlantic and Pacific railroad track, drawing a train of iron, which is being laid at a rate of more than a mile a day—no fear but it will go on to the western border of the State at nearly the same rate of speed in construction. Congress will apprehend the interests of the country and the necessities of the company, and will cure all the defects in the previous legislation on the subject of this great national thoroughfare, so as to give what the charter contemplates, and relieve the company of the difficulties attending its entry upon the lands of the Indian Territory. In less than a hundred days the track-layers will be at the doors of the Shawnees and Wyandottes, and through their lands Congress must yet provide the right of way and other rights of the company. Then on the road will go through the country of the Cherokees and Creeks across the Arkansas to the Canadian, up that beautiful valley through northern Texas, on to Anton Chico, and to Albuquerque; beyond the Rio Grande del Norte, through New Mexico and Arizona to the Rio Colorado, and so to the Pacific shore.

This, I assert, is the true route, and the one from which
a greater portion of the country will be benefited than any other. It would have been the first built but for the difficulty of reaching this, the beginning point. From where we stand to-day to California, the entire length of the line is in a mild and beautiful climate. Almost the whole of the way lies through fertile valleys abounding in water, timber, and grass. In the highlands, contiguous to the road, will be developed wondrously rich deposits of minerals and valuable ores. All the south and central portion of the Republic can reach and will obtain the benefits of this road. Down the Rio Grande a road will branch off through western Texas down to the Gulf or other railroad connections at Eagle Pass, or other points with roads coming through Texas to the southward of the great desert of the Llano Estacado. Somewhere in northern Texas the Southern Pacific Railroad of Texas will connect with this road and lead off its share of trade and travel down to a connection with the Texas Central road, which comes up from Galveston, and then on towards Marshall, to a connection with the Vicksburg and Shreveport Railroad and all the railroads of the most southern States. Further on eastward is the branch road provided for by the charter called the “Arkansas Branch.” Over this branch will go the trade and travel of the southern portion of the great central belt of States, finding distributing points where there are now railroad centres, or where they will hereafter grow up, such as Fort Smith and Little Rock, which, by means of the roads in process of construction and projected by our rapidly rising sister State, Arkansas, as will soon be points of the distribution of trade, then on to Memphis and the great river and the southern system of roads.

But I consume more than my share of time. It makes the heart of a true American swell with pride and joy in contemplating the country to be developed by this road. Westward from here it traverses for many hundreds of miles the richest and most desirable country on this continent;
the most surpassingly fertile and beautiful valley of the Neosho, then the broad valley of the Arkansas and the valley of the Canadian, the extended plateaus of the Indian country and Texas, the great deposits of lead, copper, iron, nickel, and zinc, the luxuriant grasses of the illimitable natural meadows on which the cattle in innumerable herds graze the entire year. The soil and climate adapted to cotton-growing, the sparkling fountains supplying the rushing streams which pour their wealth of limitless water-power away unchecked and unshackled by machinery, as they have done through all the centuries gone by. All this vast territory, embracing more square miles than half of Europe, and capable of sustaining profitably more population than any similar area in the world, is to be developed by this railroad.

SPEECH OF GOVERNOR McCLURG.

(From the Tribune.)

Ladies and Gentlemen:—Upon the list of names furnished me of speakers for this occasion, I find the next in order, my own, I would gladly have been excused, but it seems to be considered a duty devolving upon me, while I should regard as a pleasure to mingle my voice with the rejoicings of this day in celebration of an event so glorious and important to this city, to the great commercial city of the State, St. Louis, and to the whole State.

Apart from the rejoicings of others, I have in addition, other causes. An opportunity, a pleasant one, is offered me, through the proffered and accepted hospitality of the courteous President and Directors of the South Pacific railroad, to meet the once familiar faces of friends of days numbered with years that are past; of tried friends whose feelings have not been estranged by space nor alienated by time.
Though faces have become, in many cases, somewhat furrowed and heads silvered over, hearts have remained unchanged. I find the same welcome and cordial grip of hands as in years past before the days of railroads in Missouri. For, young as you know me to be, I have met many of you before a railroad tie was laid in our State. More than one of your citizens now hear my voice, who, more than twenty years since, heard me speak of the day when a railroad would run from St. Louis near to my then place of business, thirty miles east of this.

I was no prophet, nor the son of one; but it required little foresight to see that the increasing resources of this region of country would not be permitted to lie dormant while human energy should remain and capital could be commanded.

I have been providentially led to visit your country. I saw its beautiful valleys, its gushing streams, its fertile soil, its hills swollen with minerals, and I was tempted to cast life's lot among you. I became, twenty years ago, young as I am, a citizen of the country now included in the country lying east and directly adjoining this.

I was not attracted by your fertile agricultural and grazing lands alone, because markets were remote, transportation difficult and the returns for agricultural labor not remunerating.

I was attracted first by the minerals of your hills; for in passing over them the iron and lead ores looked out from the surface and invited release from their long confinement. And while the proceedings of this day's celebration will, to some extent, go into history, I trust I will not be considered egotistic when I say, in speaking of your resources and prospects, that my late partner, W. D. Murphy, and myself were the first persons, after the Indians, who smelted load ore, west of the Pineys and south of the Osage river. In 1844 and '45 we smelted three or four hundred thousand of pounds, and delivered a portion to merchants of this city, one of whom, at least, now honors me with his attention.
But the price was low, three to four cents per pound in St. Louis, transportation was difficult, profits small, if at all, other business was better, mining was abandoned, and it was left for this day, when labor and enterprise are better remunerated—this day of railroads and increased capital—to resume the work, to unearth these mines of wealth all around you and throw the materials upon the markets of the world.

My friends, the thought suggested to me by these remarks is, that it might not be amiss to give you a few facts and figures to be used hereafter as you may see proper, for or against any proposition of your own in argument; for I have not come here to make an argument or a political speech; not abuse anybody’s propositions, but to rejoice with everybody in their rejoicings, and to enable them to rejoice the more.

I will say then, how changed the times since the period alluded to! Some one, probably, says: “Yes. We have high taxes to pay now.” That is true, comparatively, but, my friends, we now have something to pay with. At the period I name taxes were low, and property so low that the taxes were with great difficulty paid, if paid at all. This, my friends, Governor Phelps well remembers. Property could scarcely be converted. As an illustration for all kinds of property of the farmers, cows, though valued at but from five to seven dollars per head, in vain for years sought a market, as quite a number here can testify. At one-fifth of one per centum tax, it then took the value of three or four to pay the tax upon ten thousand dollars; while now the value of two will more than do so with the rate of taxation at one-half of one per centum, that being the present rate for revenue purposes, payment of State interest, and for school purposes combined.

Yes, how changed the times! twenty-five to fifty cents per day was then the price of labor in these parts. What is it now? Make the comparison. Twenty-five to thirty or thirty-five cents was then the price per bushel for wheat,
and ten to fifteen for corn. What now? What are the causes of the change?

Your facilities for a market are better; railroads, looking Westward, have sent enterprise and population ahead. There is an increased population to consume your surplus, and enterprise to find the wealth in your hills. There is a demand for all that can be produced, because it can be consumed in this country, where railroads annihilate space, and a population of active producers and consumers interchangeably and mutually assist each other. Conversions are easy through the channels of trade, because the miner wants the wheat and beef, the farmer wants the iron, the merchant wants all, and the railroads are ever ready to transport from one to another.

You are placed within fifteen hours of the emporium of your State, when, at the period I have named, you were removed seven days' travel, and, in very late years, three. You are within one day's transportation of the same city for merchandise, when formerly fifteen days were required.

Thus are the material comforts of life increased. And these things are so seen and felt that your rejoicings to-day are not restrained.

But I ask you not to forget that much is due to the enterprise, the energy, the business ability, the perseverance of the gentlemen who have had the good fortune to be able to command the money with which to construct the South Pacific railroad, this day opened in a formal manner to your famed city—to the present directors, the business manager, and not least, the President of the present company, who have had the boldness to invest the capital.

To be sure they expected to be remunerated in the end. All hope they will be. I doubt not they will be. Still it requires nerve to invest four, five, or seven millions of dollars in any enterprise, and good management to make one a success.

But I must in candor say, never has a road been pushed
to completion thus far, since the road fell into the present hands, with more energy, skill, ability, and permanency in the character of work.

And why speak of the gentlemanly character of these persons? Why, no man can be a successful business man unless he is a gentleman. When you hear a man has been successful, you may always put him down as a gentleman. If he is not, he ought never to be, and never will be in anything successful long at a time.

Now, these are your present prospects. And you greatly rejoice. Still you have only seen the beginning of the end of your prosperity, if you are sensible—and I know you are. Do your duty as citizens, as merchants, as farmers, as miners, and as manufacturers, and soon this one road will not be able to do all the business of this country; for it will not have the capacity.

You have the fertile soil, therefore you can produce what is necessary for the subsistence of a dense population. But, if all produce from the soil, you will not have consumers in your midst for your surplus, and will be compelled to transport grains that can illy afford to pay transportation, even when there is a demand elsewhere. You, therefore, should have diversified labor. You want the miner who will seek the wealth in the hills, and at the same time will buy and consume the products of the farms at prices as high as paid in distant cities. You want the woolen manufacturers who will buy the farmers' wool at their doors and manufacture it into clothing for the farmers and miners, and who, in doing so, will cause towns of operatives to spring up, who, also, will add to the number of consumers for the farm products. The same may be said of tanners, of boot and shoe manufacturers, of hat manufacturers, of wagon and carriage-makers, of manufacturers of farming implements, of furniture and wooden ware; for the materials for all you have in profusion, and you also have in every direction the water power that can be made available. And all these things
will add to the population and increase the business of the enterprising merchants. You can and should become a great manufacturing city.

I had almost forgotten to speak of iron. Iron ore is known to exist not far from you in large quantities. Coal is not distant, indeed near. The two can be brought together here, and iron be manufactured in a thousand forms to supply the innumerable wants of a country so increasing in its population and in its demands, that a large proportion of the rails for our railroads still comes from England. Even a portion of the rails now laid between this point and St. Louis came from England. “Is this not so, Mr. Hayes, President of the Road?” He replies that it is true as to all of their rails east of Springfield.

True, while you daily walk over the ore in your hills.

Can we not stretch our minds westward and see in the not distant future, the teeming populations that a manufacturing city like this should be, will in part be able to supply.

Don’t fear you can become over much industrious, enterprising, and producing. He only is far from market who has nothing to sell. Produce—you need not look only East for a market.

Westward the march of Empire goes. Even now, while one immigrant stops with you, two others go further to the West. The red man and the buffalo disappear before the pale man and his iron horse.

But I am not here to make a speech. Railroads are not made by speeches. If they were, we would have more of them and the fare would be reduced. That is low enough, however, on excursions like the present, when we have kindly presented to us free passes. Still I like to hear others speak. I avoid it myself when I can.

I am here as one honored by the people of the State, and whose duty as well as pleasure—it seemed to be—to at least be a spectator on this occasion, so important to the South-
west, to the great commercial city of the State—St. Louis—and to the whole State; and because I have been honored by an invitation by the enterprising officers of the railroad, and wish to give all the encouragement I can by saying to them: God speed you in your work of opening up the region west to increase travel, commerce and improvement—to an increased development of those resources that lie dormant—in hastening the day when the country still west will become a mass of moving, active, enterprising citizens, and the water power of Spring river and streams beyond will be so improved that their entire valleys will present the appearance of Yankee States, and tens of thousands of busy operatives will find support, competence, and material contentment by manufacturing to supply the wants of their fellow citizens of this same great nation, who shall seek earthly Eldorados, and form other States still nearer the setting sun, and to supply whom the South Pacific Railroad will require other roads to help, and Springfield merchants others than themselves to sell and to ship supplies.

Knowing the Southwest as I do, I have no doubt as to its future wealth, enterprise, intelligence, and importance. If any one doubt, let him take a trip and prove the comfortable cars of the South Pacific railroad, and survey from the dividing ridges the well watered and fertile valleys on either side, which must be fascinating even to those who have extravagantly pictured in their imaginations a promised land.

HON. CHAUNCEY L. FILLEY

was the next speaker, and he put his congratulations in an earnest, brief and eloquent strain, which was loudly applauded.

HON. J. C. ORRICK, (Speaker Missouri House of Representatives,) followed, and indulged in brilliant reflections on the future of Missouri and the Southwest.
Mr. L. R. SHYROCK, (President St. Louis Board of Trade,)

was introduced, and received with the liveliest expressions of satisfaction. He spoke briefly and to the point, and in a manner showing him to be not only a most accomplished business man, but also one capable of putting great truths in impressive language.

HON. D. T. JEWETT

was announced, and made some pertinent remarks, giving some account of the action of the Legislature in conveying to the company now controlling it the South Pacific railroad.

R. S. ELLIOTT

was called out, and made several happy hits in a few brief remarks.

HON. JOHN HOGAN

ascended the platform, on invitation of the President, and talked with great acceptance.

LIEUTENANT-GOVERNOR STANARD

was introduced. In St. Louis, he said, we have long heard of the Southwest, of its genial clime, rich prairies and valleys, and inexhaustible mines, and have long desired more intimate communication with this section. While Springfield had been congratulated so much, he desired to felicitate St. Louis upon the consummation of the great iron link which bound her to the beautiful and fertile fields now in view.

Governor Stanard continued his remarks for some few moments only, but in a ready off-hand style which elicited
the closest attention, and his well put points drew forth frequent applause.

HON. ROBT. T. VAN HORN

was next introduced, and spoke as follows:

Mr. President and Fellow-Citizens: I did not come here to make a speech. I came to see Southwest Missouri, to see Springfield, to see Jeb. Smith, Sam. Headlee, and other old personal friends, and to see ten thousand happy people, happy in the consummation of the long looked for event—the building of the South Pacific road to this city. Coming from a section of the State earlier blessed with railways than you, I can realize how you feel to-day. For if you feel half as jubilant over your road, as we in Kansas city did over our first locomotive, you are supremely happy.

My attention was first drawn to this road by reading the speeches of Colonel Phelps, while he was a member of Congress, about the “beautiful valley of the Canadian.” And I have become so enamored of that enchanted region, that I do not intend to be satisfied until, at the request of President Hayes, I shall make one of a party like the present, and pass through that valley on our way over a completed road to the Pacific. It is to be, must be, and by the promise of to-day, shall be.

Springfield has for a generation been the political capital of Southwest Missouri. You have before you now another and a far better destiny, if you only will it—to become the railroad capital of the Southwest. From my home—the rising young metropolis of Kansas city—we will have a road by way of Springfield to Memphis, giving you an outlet north and south. Then we intend to use your road going to the Pacific, and, to make all things even, you can use our road to the Gulf, thus aiding and binding together all parts of our great State.

Let me say a word for the men who have built your road. The politicians sometimes take great credit for doing great
things. It is true, charters and legislation are the first steps in railway enterprises, but there is more of the real eloquence of progress, in one neigh of the iron horse as he thunders over your prairies, than in all of the speeches of all the politicians you have been blessed with, since the South Pacific was first heard of. The real men are the men who do the work—the men who, living more than a thousand miles from you, with no prior interests in our State, had the enterprise, the courage, the patriotism, to put down their money, and put forth their energy to build this magnificent artery of commerce for Missouri. And it has been no small work even in railroad building. I have had the good fortune to travel over most of the roads—the great lines of the Union—from the Atlantic to the Pacific, and, save the section of the Sierra Nevada mountains on the Central Pacific of California, there is, with a single exception, no such heavy work, such difficult engineering, as has been necessary to put through this road west of Rolla, through the country of the Gasconade. These men are entitled to every honor, to every word of praise or gratitude, which has been given them, and more than we ever can give them.

Now, let me give you a word of advice, for unless you are unlike other communities you will need it. When you begin to think this road is charging you too much for passage, or too high freights, as many do after they get accustomed to railroads, don’t sit down and abuse the company, and growl over the heartlessness of monopolies, but go to work and build another road, more roads, and by competition bring down rates to your liking. This is the proper way for an enterprising people to overcome such causes of complaint. I will undertake now to assure on behalf of the owners of this road, that you will never find them complain of such a remedy.

HON. S. H. BOYD

was the next speaker. He said:

CITIZENS OF THE SOUTHWEST.—Do you hear the shout of
the locomotive? It announces the completion of a revolution for the benefit of those so fortunate now as to be citizens of this rich and most lovely portion of the great Commonwealth of Missouri. This day inaugurates an epoch to us—a grand gala day—a day of rejoicing, not only on the part of the thousands and thousands of people who are here, but to all Southwest Missourians. We rejoice that our unparalleled agricultural resources are to be made available to us, and upon our illimitable natural pastures will graze many more thousands of cattle. But above all we rejoice that this new means of communication will bring to our peaceful, happy homes, the new blessings of comfort and intellectual enjoyments. (Applause.)

With warm hearts and open-handed hospitality, we welcome the men whose enterprise and energy have brought about this result. We welcome them and congratulate them, on having achieved the grand feat, which for twenty years has baffled all efforts of our people; to them and to the distinguished representatives of the heretofore more favored cities of the State, who come to congratulate us on our good fortune, we tender our most hearty hospitalities.

These friends who are visiting us from other cities cannot comprehend the extent of our rejoicing, because they have not felt as we have, for a quarter of a century, that we possessed the best country of all the West, and yet cut off from markets and from all trade and commerce of the great valley by the mountains of the Osage, the Gasconade, and Niangua, which seemed an impassable barrier to all efforts at making us an outlet.

Here we are to-day, away out here on the famous Ozark mountains, for the first time brought into communication, by all the means known to the highest civilization of the Christian era, with the great seats of learning and refinement, and the great markets of the world. I have been twice happy in my life. I doubt if any one of all this happy throng is really as happy as myself. The gloriously bright
spring-time of early May, when the flowers were just beginning to deck our prairies, I knew the first greatest happiness of a man; and now, to-day, after years and years of the best energies of the best years of my life have been freely devoted to this object, I am permitted to see it crowned with glorious success.

Fellow citizens, I have lived with you all my life, you have again and again confided to me your interests in the National councils. It is a source of regret to me that I have not done more and better things for you; but whatever I may have done, or failed to do, I have the proud consciousness of having done for you all in my power, and cannot reproach myself for any of my public acts. (Cheers.)

I thank you as a friend and neighbor. I have now done the work you set before me, and about all I have undertaken to do. As your friend and neighbor, I will try to labor with you in the private walks of life for the attainment of the highest standard in our community of a well organized society, in which Christian principles and intellectual advancement shall control.

We must not forget these New York and Boston friends; we must remember what we are indebted to them. We will hope to see the distinguished President, Mr. Hayes, among us frequently, and I hope you may all come to know him as well as I do, and I know you will esteem him as highly. And I need not tell you of the indefatigable managing director, Mr. Peirce. I am justified in styling him the king of railroad constructors of our country. Now, my friends, you will soon see all the beautiful lands of this region of country utilized. The railroad company will dispose of its broad acres, some of which you may see spread out yonder, just beyond the city limits, and soon the settlers will be upon it.

Mr. Hayes says that the watch-word of the company is onward, and he only says what he means. When he says
onward, he means on to the Pacific—he means on to where he will find the goods of the Celestial Empire. He is a man in whom there is only one complete and whole thought as to his intentions, and that is success—victory; he has it; he will continue to enjoy it, and it will crown him and his associates all the way along the 35th parallel, whether in the valley lands of the Arkansas and Canadian, on the plains, or among the mines of New Mexico and Arizona. Good bye. (Cheers.)

MR. J. MILTON TURNER

made some appropriate remarks, which were well received.

SENATOR HEADLEE

closed the speaking with some well-timed and happy remarks.

AFTER FESTIVITIES.

A ball was arranged for those tarrying in Springfield on Tuesday night, and doubtless a good time was experienced by those attending, as the preparations were on a liberal scale.

Wednesday morning an excursion took place to the end of the line, ten miles west of Springfield, on the Atlantic and Pacific Railroad, where the track was being laid at the rate of more than a mile per day. A number of the distinguished guests tried their hands at driving a spike, and much merriment was occasioned by the contrast of their efforts with the practised strokes of the track-layers.

Extracts of article in the *Missouri Democrat* of May 5th:

**THE SPRINGFIELD CELEBRATION.**

**ADDITIONAL PARTICULARS.**

Notwithstanding the two columns of telegraphic matter
printed in the Democrat of yesterday morning, concerning the big railroad celebration in Springfield on Tuesday, commemorative of the completion of the road to that point, many interesting incidents and particulars failed of mention, and our reporter feels constrained to give a brief resume of the trip from St. Louis to Springfield and return:

SOUTH PACIFIC RAILROAD AND ATLANTIC AND PACIFIC ROADS.

The South Pacific branches off from the Missouri Pacific at Pacific, formerly called Franklin, thirty-seven miles from the metropolis of Missouri, and is at present completed to Springfield, two hundred and forty-one miles from the western bank of the Mississippi at St. Louis. At Springfield the Atlantic and Pacific road commences, and the track is laid and in running order ten miles beyond this point. When this latter road shall have been completed, the great trans-continental link to the Pacific ocean, on the 35th parallel, will have been perfected. The grading has been done fifty miles west of Springfield, and the rails have already been purchased with which to lay the track. Ground was broken for the South Pacific in November, 1868, preliminary surveys having been made the previous summer.

OFFICERS AND DIRECTORS.

The following gentlemen are the officers and directors of the South Pacific:

President—Francis B. Hayes, Boston.
Managing Director—Andrew Peirce, Jr., St. Louis.
Directors—Uriel Crocker, Isaac Rich, Jacob Sleeper, Charles J. Morrill, George S. Curtis, Boston; Andrew B. Stout, Joseph Seligman, William H. Coffin, New York; Frederick Billings, Woodstock, Vermont; Oliver Ames, North Easton, Massachusetts; Charles E. Harwood, Springfield, Missouri.
Superintendent—W. H. Patriarche.
THE EXCURSION AND WHO PARTICIPATED IN IT.

To attempt to give the names of all who participated in the excursion and festivities attendant upon the jubilee at Springfield on the 3d, in honor of opening the South Pacific to that point, would take up a space unwarranted by the record. There were a large number whose attendance reflected honor to the occasion. The excursionists comprised—besides a score or more of ladies, whose presence gave respectability and tone to what might otherwise have been a mixed and noisy crowd—the Governor of the State and an ex-governor, judges of superior and inferior courts, legislators, aldermen, lawyers, doctors, merchants, railroad men, capitalists, river men, newspaper men. It was a happy party, and from the time of leaving St. Louis, about seven o'clock on Monday evening, until the arrival at Springfield, about eleven o'clock on Tuesday morning, nothing occurred to mar the harmony of the occasion or ruffle the temper of the company's guests, if we except a little grumbling on the part of those who were unable to secure places on which to repose their bones and indulge in "tired nature's sweet restorer" in the sleeping cars.

COMPLIMENTARY RESOLUTIONS.

Before reaching St. Louis, yesterday, the following complimentary resolutions were read in the several cars, and adopted:

Resolved, That the guests of the Directors of the South Pacific Railroad return to them and the officers of the road, and especially to Messrs. Hayes, the President; Peirce, the Managing Director; and Patriarche, the Superintendent; their earnest and hearty thanks for the very interesting and pleasant excursion on the occasion of the celebration of the opening of their road to Springfield, on the 3d inst.

Resolved, That the generous and bountiful supply served by that excellent caterer, Mr. Pezolt, surpasses anything we could have expected on such an occasion.
Resolved, That it is the unanimous opinion of the five or six hundred guests from St. Louis and points along the route, that the construction of this road (the new part especially) is unsurpassed by that of any road in the country.

Resolved, That the rapidity and completeness with which this road has been finished thus far, speak in the strongest possible language of the ability of the Managing Director and his assistants, and commend the road to all travelers and business men who may have occasion to travel or send goods to the Southwest; and we bespeak for the company the most favorable consideration of our citizens and the public generally.

Extract from an article in the Tribune, of Jefferson City, Missouri:

SOUTH PACIFIC RAILROAD EXCURSION.

We have been on the Railroad excursion to Springfield, and the question is, how shall we describe it? Others have anticipated us in giving the amusing incidents of the trip; in telling who were there; in describing the luxurious lunches given by the directors; in recording the speeches of magnates, railroad and political, and in portraying the general features of the country. Rather than tell a twice-told tale, we shall make but brief reference to these matters, and shall only say that we believe it to be the most pleasant railroad excursion ever given in the west. Its bonfires, processions, salutes of artillery, songs of glee clubs, pleasant conversations, and welcome speeches, will long live in the memory of every excursionist.

Having said this, we pass on to notice what the South Pacific Company has done, and what are the effects of its labors.

In November 1868, the present company commenced work
at Arlington on the Gasconade, 89 miles from the junction of the South Pacific with the Missouri Pacific, in a country destitute of supplies. Over 500 tons of hay purchased in St. Louis were hauled over the hills and through the mud, to feed the teams at work between Arlington and Lebanon. Over 12,000 men were sent out on the work by agents in Eastern cities. The first work was to ascend from the valley of the Gasconade to the summit of the Ozarks, and it was of the most expensive character. For the first eleven miles there is not a foot that is not either cut or fill. Some of the fills are of rocks 60 feet in height, costing $60,000 per mile. Three-fourths of the material moved west of the Gasconade has been either rock or hard-pan. Near Marshfield is one mile of rock excavation that cost $70,000. Several other miles on the road cost from $30,000 to $60,000 each. Thirty miles of the road from Arlington to Lebanon has rock ballast, which will last for ages. The depots are of modern construction, and of the most substantial character. At Springfield, we saw two depots of brick. The freight freight depot is 100 by 24; the passenger depot 78 by 26. At St. Louis is another depot 400 feet by 70. The piles on which it stands were growing near Little Piney on the 7th of February last, and in twenty-one days afterwards, the depot was receiving freight. We doubt whether this has ever before been equalled in the history of railroads.

We next come to consider what it has done in developing the resources of the country. Between Arlington and Springfield, it has started thirteen new towns since last November. At Richland, 36 miles west of Arlington, there was then not a a single house and only one inhabitant, who, living in a tent, sold his goods out a of wagon. There are now there six stores that will, if they continue as they are now doing, sell from $30,000 to $50,000 worth of goods each this year.

At Lebanon, in the new town, are 42 stores on one street, one of which has averaged $1000 of sales per day since last November.
At Springfield a new town has been established, about a mile from the old town. It is laid off on both sides of the road, with public squares and wide streets. Out from the freight depot, already referred to, runs a mercantile switch on which are now four large store-houses nearly completed, and to which five others will soon be added. Here, too, is a hotel with all modern improvements, built by the company, containing over eighty rooms, situated, as it is, on the summit of the Ozarks, with a view, in one direction, of ten miles, and in another of thirty, in a county celebrated for its pleasant drives, romantic scenery, crystal streams and wondrous caves. We predict that this will be one of the most popular summer resorts of the west. Old Springfield need not fear for its laurels. Hitherto it has been so confident of its strength that it has lain dormant, waiting for good luck to drop into its lap. This new town is causing it to exert its energies. It is building a new hotel at a cost of $60,000; a new market-house is also to be erected. Over 2,500,000 of bricks will be put into buildings there during the present summer, and before five years elapse the space will be built up between the two towns, which together, will then make a city of 20,000 inhabitants.

Under the influence of cheap transportation, Granby, which now turns out $200,000 worth of lead, per annum, from a single section, will double its yield; and there are, according to Prof. Swallow, in Southwest Missouri, four hundred square miles which have equal indications of being valuable lead lands.

In eighteen months the company has done twice as much as was done by previous companies in sixteen years; it has built one hundred and fifteen miles of first-class road; it has triumphed over obstacles which appalled ordinary engineers; it has not only fulfilled, but anticipated its engagements. Due at Springfield in December, 1871, it went ten miles beyond it in May, 1870. It has proved itself worthy of our confidence, and we ask our representatives, both in
State and National legislatures, to give it that consideration which its merits justly demand.

We have also alluded to the resources of this magnificent empire of Southwest Missouri. Rich in agricultural, mineral, and manufacturing resources, we need railroad connection with it. There are iron mines, rivaling in extent and quality those of Lake Superior or Pilot Knob; pine forests equaling those of Wisconsin or Michigan; water power not inferior to that of New England, and lead mines excelling those of Galena and Dubuque.

The following is a letter received from General John McDonald, Supervisor of Revenue for Missouri, Arkansas, Indian Territory and Kansas, while this was going through the press:

United States Internal Revenue,
Supervisor's Office. District of Missouri, Arkansas, Indian Territory and Kansas,
St. Louis, Mo., May 23, 1870.

Dear Sir: Pardon the liberty I take in addressing you in regard to the impression made upon my mind by trips over the South Pacific railroad.

The road, at present, is complete from St. Louis to Springfield, Missouri, and is being pushed to the line of the Indian Territory with all possible speed. I was perfectly surprised at the stability and solidity of the road. For miles in passing the Ozark Mountains the road is cut through solid rock; and the curves, inclination of the track, fills, culverts and bridges are only equalled by the Baltimore and Ohio and the Pennsylvania Central Railroads. The iron Fish-joint, making one continuous rail, is laid almost perfect; the ties, 2,640 to the mile, are large and durable, and are held in their places by a general system of rock grouting.
The road passes in many places through a mountainous country, resembling that lying along the Central Pacific.

The scenery along the road is magnificent, and the rolling woodland and prairies, stretching far away on either side of the route, invite the husbandman to their productive laps.

The undertaking was truly great; and the men who have spent their capital, time and energy, in the prosecution of this national work deserve the highest praise from the public; and their future efforts should be encouraged by the generous support of the Government.

I feel satisfied that the march of civilization will conduct your noble enterprise through the Indian Territory; and the demands of progress will guarantee aid and right of way to the golden shores of the Pacific.

The Government will be directly benefited by your road, and, therefore, it should lend a helping hand to its perfect completion.

Wishing you every success, because you deserve it,
I am truly, &c., your friend,

JOHN MCDONALD,
Supervisor.

Hon. Francis B. Hayes,
President of South Pacific and Atlantic and
Pacific Railroad Companies.
